

INTEGRATED FARM & LAND MANAGEMENT (IFLM)

A PRACTICAL, WHOLE-OF-FARM APPROACH TO CARBON AND LAND STEWARDSHIP

WHAT IS IFLM?

The Integrated Farm & Land Management (IFLM) method of carbon farming is set for release in 2026. It will allow land managers to implement different practices in a single project, reflecting how properties operate as connected landscapes.

Its modular design offers a framework to match business goals and land capability.

INSIGHT

INNOVATION

LEADERSHIP

WHY LAND MANAGERS ARE PAYING ATTENTION

IFLM is designed to support whole-of-farm carbon projects across a range of operations, including mixed enterprises. It may allow you to:

- ✓ Include natural regrowth of trees and shrubs as part of a project
- ✓ Recognise soil, vegetation and land management outcomes together
- ✓ Manage multiple activities under a single project
- ✓ Be flexible as science, data and technology improve

IFLM aims to make carbon feel like land management - not a separate system.

WHAT'S EXPECTED

The method is expected to begin with a small number of core modules, including:

- Regeneration of trees and shrubs
- Planting of trees and shrubs
- Additional modules, including soil carbon, will likely be added.

Key elements including eligibility requirements, measurement approaches and module makeup will be confirmed.

DOES IFLM SUIT YOUR PROPERTY? CONNECT WITH US TO BE IFLM-READY.

IFLM could be a good fit if:

- you prefer a whole-of-farm approach.
- improved soil health or grazing productivity aligns with your enterprise goals
- natural regrowth of trees and shrubs, or undertaking strategic tree planting, fits your land use.
- you'd like to be paid to build long-term resilience and landscape health.
- you want flexibility as your business, conditions or technology change.

WHAT YOU CAN DO

- Review current and planned land management practices.
- Improve record-keeping (e.g. grazing, soil, vegetation data).
- Consider where regeneration or soil improvement fits your system.
- Register your interest and stay informed.

Preparation will help you make confident decisions once the method is available.

Climate Friendly supports land managers across soil, vegetation, grazing and savanna carbon projects, and is actively engaged in IFLM consultation and development.
